

Microsoft Dynamics Solution For Health Care

Health care providers need solutions to help improve services while reducing the cost of supporting business operations. They need tools that empower staff to make confident business decisions. Microsoft Dynamics GP can help you integrate and collaborate between systems, reduce data-entry and meet demands. Enabling the secure and seamless exchange of information across organizations, Microsoft Dynamics GP connects and empowers people to make a business and clinical impact.

Microsoft Dynamics GP provides the functionality to help automate tasks, streamline data entry and increase productivity.

Financial Management

Dynamics GP helps integrate your front and back office to give you strong financial controls, audit trails and the flexibility to adapt to changing needs.

Materials Management

Delivering the right materials to the right place at the right time is essential to high-quality healthcare. Dynamics GP can integrate the entire supply chain and automate inventory management processes.

Payroll and Human Resources Management

Help automate payroll through employee on-line self-service options, use templates for employee records and have the ability to track applicant and employee information.

Your number one priority is patient care. BKD understands. Your financial management solution is the last thing you need to worry about. When upgrading your ERP system there are many things to consider for your implementation to be successful.

The Top 10 Benefits You Should Expect When Upgrading Your Financial Management or ERP System For Health Care

Improved Operational Efficiency ✓

The system should help support lean best practices while automating tasks to help increase productivity and decrease overhead.

Low Total Cost of Ownership ✓

Be able to implement only the functionality that you need to achieve a low total cost of ownership and a rapid return on investment, with additional functionality available.

Elimination of Paperwork ✓

Make sure you have an infrastructure to integrate financial systems and automate the flow of data to decrease paper-based processes.

Shorter Budget Cycles ✓

Look for integration of front office to back office to create strong financial controls and audit trails that give your company easy access to data, and the capability to drill into information.

Accurate Forecasting ✓

You should be able to automate workflows and coordinate planning based on user-defined roles and rules.

Flexible Financial Reporting ✓

Look for an easy-to-use approach that will enable your employees to create reports quickly, with powerful row, column and reporting tree building blocks.

Payroll Management ✓

A new system should give you the control and security features needed to manage sensitive information and support automated salary disbursement through direct deposit.

Improved Recruitment and Retention ✓

You need a solution that tracks complete data including applicant references, education, skills and interview information.

Reduced Material Costs ✓

Have the ability to efficiently manage your entire materials supply chain through features such as distributed requisition management, purchasing and vendor management and comprehensive inventory control.

Empowered Decision Making ✓

A new system should standardize and integrate financial information exchange across your entire organization.
