Migrate Data with Ease Using Data Porter in MAS 500

Date: Wednesday, July 20, 2011
Time: 10:00 - 11:00 a.m. Central time

Did you know the tools used during an implementation can help your everyday business processes? Data Porter, a Sage MAS 500 module, is used to input data and reduce conversions in real time. Used from almost any standard MAS 500 data entry screen, you can use Data Porter to populate mass amounts of data without programming help.

In this webinar, we will discuss the features and benefits of Data Porter that can help you increase productivity. We will show you how to use Data Porter to upload information, map data, correct upload errors and more from an Excel spreadsheet. We also will show you how to turn Data Porter into a data editor. A question-and-answer session will follow the presentation.

The Presenter
Chad Walter is a BKD Technologies supervising consultant on the Sage Software implementation team. He assists with implementation, training and support of Sage MAS 90, Sage MAS 200 and Sage MAS 500 software for manufacturing and distribution clients. He has more than seven years of experience implementing and developing software solutions.
